

Le service national d'observation du niveau des eaux littorales : Produits et Services

2 observables : Le niveau marin et les mouvements verticaux du sol
2 techniques de mesure : La **marégraphie** et le **Géodésie Spatiale**

Testut Laurent
LIENSs

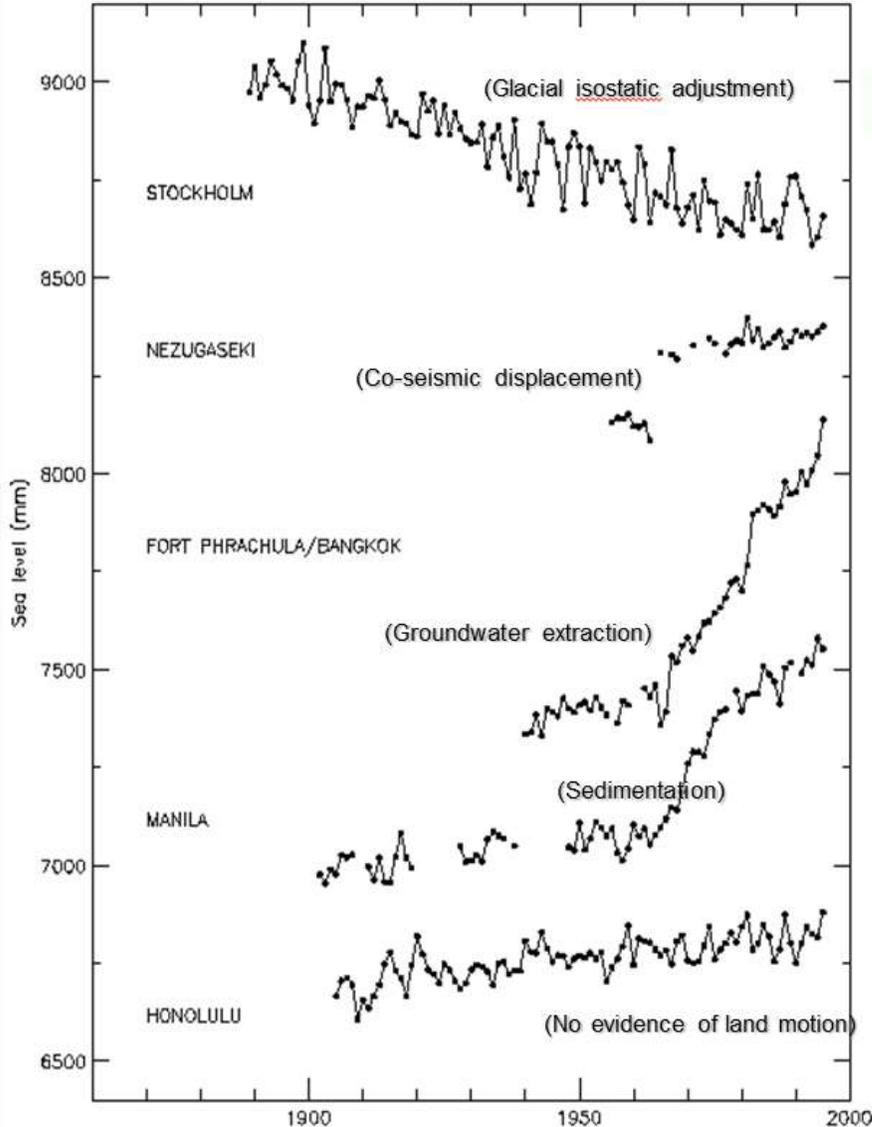

Source PSMSL: http://www.psmsl.org/train_and_info/geo_signals/

- Objectifs affichés (qui évoluent : Groupe d'experts) :
- Circulation Océanique
 - Tendances long terme
 - [1992] Comparaison altimétrie satellite
 - [2004] Tsunamis et ondes de tempête
 - [2009] Références verticales (unification)
- Autres (secondaires, implicites) :
- Nouvelles technologies & performances
 - Données historiques ("data archeology")

Mouvements Verticaux

horaires

horaires

Mensuels & Annuels

Temps réel

Missions :

- Diffusion de données de la meilleure qualité (niveau moyen, mouvement du sol)
- Fournir les rattachements GNSS-Marégraphes (calibration des altimètres, unification des références verticales)
- Soutien à la sauvegarde du patrimoine marégraphique (cf présentation du Shom)
- Evaluation des performances des marégraphes (site atelier)

Systeme ouvert :

- Vocation à accueillir d'autres techniques (InSAR, Gravimétrie, Altimétrie, ...) et d'autres réseaux

Plus value SONEL

- Centralisation de l'information pertinente
 - GPS, marégraphie, nivellement, métadonnée
- Regard expert et critique sur les données avant diffusion
- Produits & services
 - Tendances du niveau marin (relatif & absolu)
 - Vitesses verticales aux marégraphes
 - **API**
 - **outil en ligne → TGCAT**

Welcome to SONEL

SONEL aims at providing high-quality continuous measurements of sea- and land levels at the coast from tide gauges (relative sea levels) and from modern geodetic techniques (vertical land motion and absolute sea levels) for studies on long-term sea level trends, but also the calibration of satellite altimeters, for instance.

SONEL serves as the GNSS data assembly centre for the Global Sea Level Observing System (GLOSS), which is developed under the auspices of the IOC/Unesco. It works closely with the PSMSL and the University of Hawaii Sea Level Center (UHSLC) by developing an integrated global observing system, which is linking both the tide gauge and the GNSS databases for a comprehensive service to the scientific community. It also acts as the interface with the scientific community for the French tide gauge data.

News

2023 Dec 11-15 : AGU Session dedicated to GNSS for water level (29 juin 2023)

12-14 January 2021 : First EuroSea tide gauge network workshop (28 octobre 2020)

Now published : IOC Manual & Guide 83 on Quality Control of in situ Sea Level Observations (2 juin 2020)

Station summary MAYG

IGS-type acronym : MAYG

Latitude : -12.78205446

Longitude : 45.25815044

Installed date : 2013-11-21

Decommissioned date :

Country : FRANCE

City: DZAOUZJI, MAYOTTE

Station status : active (green)

Distance to Tide Gauge (m) : 2

Domes Nr.: 90101M001

Station operator: (IGN) - Institut National de l'Information Géographique et Forestière (CNES) - Centre National d'Etudes Spatiales

IGS-like station form : mayg_20231211.log (current) View

GNSS-IR

GPS position times series MAYG

Analysis center: **ULR** NGL SARI

Reference Frame: ITRF14
Ellipsoid: GRS80

Position (Reference epoch: 2018.0890)
Longitude (°): 45.25816311
Latitude (°): -12.78205234
Height (m): -16.3700

Velocity (mm/yr): -2.49 +/- 1.28

Possible offsets (mm)

2015-295	M
2018-135	E
2018-141	E

M Material change or malfunction
E Earthquake
RF Reference Frame change
U Unknown
NA Not available
— Position discontinuity

TGCAT

The tide gauge intercomparison tool (TGCAT : Tide Gauge CATalogs) started in the frame of EuroGOOS Tide Gauge Task Team (TGTT) as a simple command line tool to help the task team to identify gaps and duplicates between the increasing numbers of data portals providing in situ observation. It has been developed at the origin to serve TGTT and help to inter-compare some basic information (coordinates, names, id, ...) between catalogs of the main data assembly center of the Global Sea Level Observing System (GLOSS). It has been adapted to an online tool in the frame of the Horizon 2020 EuroSea European project. It now allows to compare the content in terms of length of the timeseries between different catalogs in the form of chronograms (or timeline). The online tool contains some basic statistical information and filter capabilities.

SONEL API

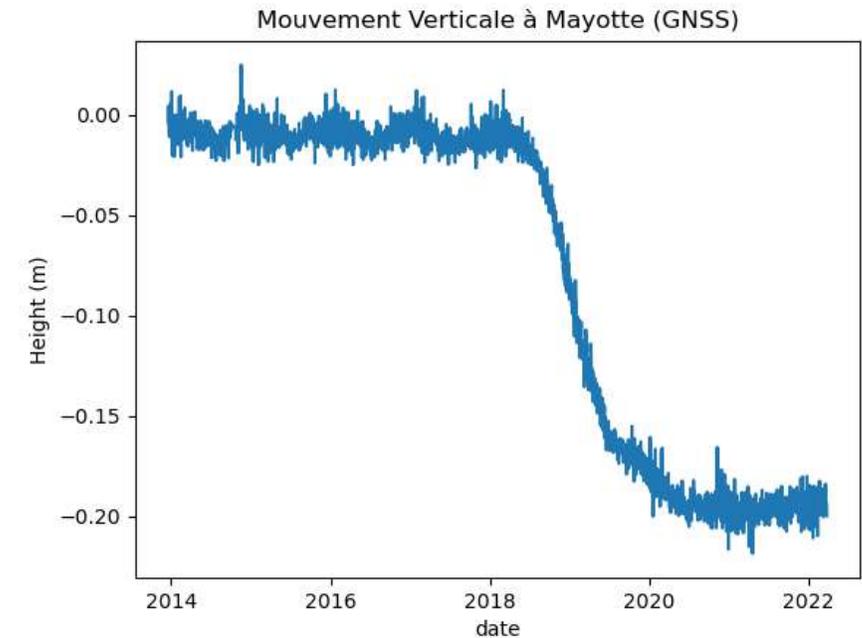

La nouvelle api SONEL : <https://api.sonel.org/v1/doc/index.html#>

```
import pandas as pd
import matplotlib.pyplot as plt

# recuperation des données GNSS de Mayotte
data_url = r'https://api.sonel.org/v1/products/vlm/gnss/timeseries?solution=NGL14&acro=MAYG&format=json&sampling=daily'
data = pd.read_json(data_url, orient='index')
vlm = pd.DataFrame(index=data.loc['dates',0], data={'up':data.loc['du',0]})

#plot
plt.plot(vlm.index, vlm.up)
plt.title('Mouvement Verticale à Mayotte (GNSS)')
plt.xlabel('date')
plt.ylabel('Height (m)')
plt.show()
```

Remerciement à l'équipe SONEL
